

Growcoon

The innovative, fully biodegradable propagation system

Growcoon is the optimal system for all propagation methods such as sowing, rooting of cuttings, grafting, tissue culture and hydroponic systems. In combination with high quality propagation substrates from Klasmann-Deilmann, the Growcoon forms a stable root ball. The elastic and open structure of Growcoon supports a faster root

development of young plants and a better aeration of the root zone. Advantages for the grower are shorter propagation times, enhanced plant performance and highly efficient transplanting. Growcoon can be used in all established tray systems. It can be placed into the tray manually or automatically with a dispenser that is preconnected with common tray filling lines.

Growcoon provides multiple benefits

Fully degradable

- Based on biodegradable polymers
- Zero waste, no harmful residues
- Safe for plants, humans and environment
- Does not need to be removed before planting

Improved cultivation

- Shorter crop cycles
- Lower failure rates
- Easy to remove from the tray

Better roots

- Fast and excellent root development
- Strong development of hairy roots
- Higher root ball stability

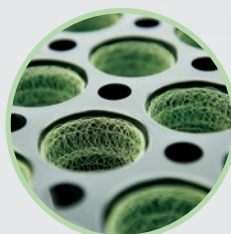

Efficient and easy handling

- Perfect tray fitting
- Ideal for automation
- No glue plugs or plastic pots needed anymore
- Less substrate needed per plug
- Flexible use of any loosely filled substrate

Perfect microclimate

- Fast and unhindered rooting through the net structure
- Allows a higher oxygen exchange
- Stimulates strong root growth
